

## Concept

Lack of standardized informational displays is a problem evident in the U.S. Army facilities in Europe. A plan to incorporate standards for medical chartrack holders, literature holders, magazine racks, bulletin boards and other notice boards is encouraged.

With new patient privacy requirements, it is imperative to use products that comply with HIPAA (Health Insurance Portability and Accountability Act). Patient privacy can be provided with new HIPAA Privacy Chart Holders available through Peter Pepper Products. Many models are available with full height front panels that conceal confidential information but reveals just enough of the chart to know one is inside.

## Solution

In order to ensure a unifying, quality aesthetic, two primary lines of products for chart racks and communications boards are recommended. These products include versatile modular wall-mounted rack systems, which accommodate materials of various sizes and allows for groupings in arrangements. This system also coordinates in appearance with the signage package specified elsewhere.

Medical chartrack holders that are similar in style to the standard earlier established shall be HIPAA-approved.

Informational displays are selected for their durability, utility and compatibility with the surrounding environment. Standards are set for their application to ensure a uniform quality of application.

## Specification

All products shown are manufactured by the Peter Pepper Products Company. Communications boards of a similar design may be available through other GSA vendors as well.

Products:

Racks, shell	Cool Grey
Racks, ribs & dividers	Graphite
Racks, front panel	Clear acrylic
Magazine Rack	Series 450
Literature Rack	Series 660
Chart Holder	Series 13130H (replaces 13120, which did not meet HIPPA requirements)
Communications Boards, edge profiles	Natural anodized aluminum edge profiles
Communications Boards, fabrics	Silver Neutral
Communications Boards, writing surfaces	White (non-graphic, 2x2 grid or quadrant)
Mini-mint Series Conference Center	Natural anodized aluminum edge profiles
Tactics Series for Dry Erase & tackboards	Frame 5 Slimtrim

## Implementation

Magazine, brochure and chart racks are available in multiple configurations of various-sized elements. Where medical chartrack holders are used, they shall be located on walls adjacent to room identification signs.

Communications boards shall be located at a convenient working height for the user, typically with the bottom of the unit installed one meter above the finished floor. Groupings of various units shall emphasize consistency among individual elements, both in appearance and mounting height.
